## In the Claims:

Nos: 1, 3-19.

## Claims 1-9 have been amended.

1 (Amended). An isolated DNA sequence comprising a polynucleotide encoding a polypeptide selected from the group consisting of SEQ ID Nos: 1, 3-19 wherein said polypeptide is required for the synthesis of antibiotic TA. 2 (Amended). An isolated DNA sequence according to claim 1, wherein said polynucleotide has a sequence as set forth in and one of SEO ID NOs: 2 and 20. 3 (Amended). An isolated DNA sequence according to claim 2, wherein said 63 DNA is SEQ ID NOs: 2 or 20. G4 4 (Amended). A vector comprising the DNA sequence according to claims 1 or 2. 5 (Amended). A vector, according to claim 4, further comprising a promoter sequence operatively linked to said DNA. 6 (Amended). A host cell transformed with the vector according to claim 5. 7 (Amended). An E. coli host cell transformed with the vector according to 67 claim 5. 8 (Amended). A method of making a polypeptide comprising the following steps: a) culturing a host cell according to claim 6 under such conditions that the encoded polypeptide is expressed, and b) isolating said encoded polypeptide. 9 (Amended). An isolated polypeptide required for the synthesis of antibiotic TA, said polypeptide having a sequence as set forth in and one of SEQ ID
